School ERP — End-to-End Flow

Oct 10, 2026 · @Nagendra

At a glance

A school signs up, sets itself up and gives people access once; after that the same cycle runs every session — admissions, daily school, fees, exams, monthly work and communication — and the year-end rollover starts the next session from the old one.

end-to-end flow · 10 stages and exits

Stages 1–3 happen once per school; stages 4–10 repeat every academic session.

Panel	Used by	Main stages
Platform panel	Product owner and support team	All stages, from outside the school (see Platform panel below)
School admin panel	Owner, admin, principal, office staff	2–10
Teacher panel (web and app)	Teachers	3, 5, 7, 8, 9, 10
Parent panel (app)	Parents and guardians	4, 5, 6, 7, 9

Panel	Used by	Main stages
Student panel (app)	Students, usually Class 6 and above	5, 7, 9

Platform panel (super admin)

The Platform panel is where the company that owns the software runs the business: it creates and bills school accounts, maintains the master data every school uses, supports schools and watches system health — but it does not read any school's student data unless that school grants time-limited access.

It runs on its own address (for example `admin.<product-domain>`), with its own login and its own users, completely separate from school logins.

Platform roles

Role	Who	Can do	Cannot do
Super Admin	Founder / product owner (1–2 people)	Everything in the Platform panel, including platform users, plans, prices and global masters	Read school data without an approved support grant
Support	Support team	View school list and health, reply to tickets, request support access, use "view as school admin" during an approved grant	Change prices, plans or global masters; delete a school
Onboarding / Sales	Sales and implementation team	Create school accounts, set trial, run data import for a school, record demo and follow-ups	Billing changes after activation
Finance	Accounts team of the company	Invoices, payments, credit notes, refunds, dunning, GST reports	Change school data or masters

Role	Who	Can do	Cannot do
Content and compliance	Academic / compliance specialist	Board templates, grade scales, statutory rates, notification templates (new versions)	Billing, support access

MFA is mandatory for every platform user; Super Admin and Finance logins can be limited to office IP addresses.

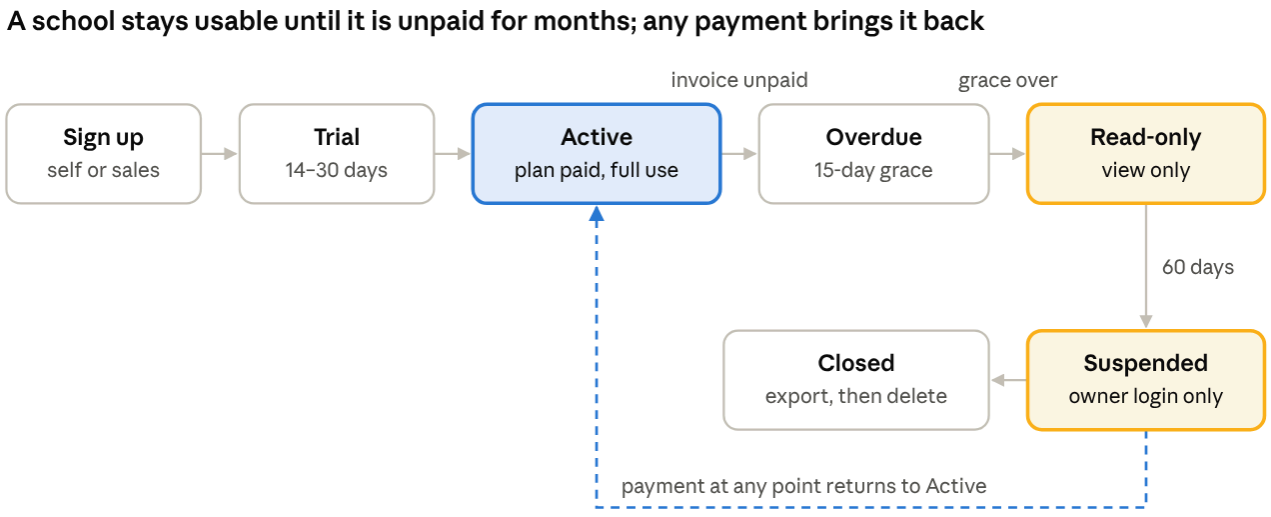

Platform modules

Module	What it shows / does
Platform dashboard	Active schools, schools on trial, trials ending this week, monthly recurring revenue, overdue amount, total students, today's errors and failed jobs, SMS/WhatsApp credit balance
Schools	List with type, board, city, plan, students, status (Trial, Active, Overdue, Read-only, Suspended, Closed), last activity; school detail page with usage, modules enabled, branches, admins, invoices, tickets, audit
Plans and pricing	Plans (Starter, Standard, Premium), price per student per year or flat price, included modules, add-ons (transport, hostel, payroll, WhatsApp), limits (students, branches, storage), trial length
Subscriptions and billing	Subscription per school, renewal date, invoices with GST, payments (gateway or bank transfer), credit notes, dunning reminders, revenue reports
Message credits	Wholesale SMS/WhatsApp credits bought by the platform, credits allocated or sold to each school, usage per school, low-balance alerts
Global masters	Board and assessment templates (CBSE, RBSE… by session version), grade scales, certificate formats (TC per board), statutory rates (PF, ESI, professional tax slabs, TDS slabs) with effective dates, notification templates with DLT IDs, default fee heads, holiday templates by state, institute label sets

Module	What it shows / does
Support desk	Tickets raised by school admins from inside their panel, priority, assignee, SLA; support access requests and grants
Monitoring	Per-school usage (logins, attendance marked, receipts), API errors, slow queries, queue backlog, failed webhooks, backup status, storage used
Announcements	Messages to all or selected school admins (new feature, maintenance window, compliance change), shown as a banner and email
Releases and feature flags	Turn new modules on for pilot schools first, then for everyone; release notes
Data requests	School data export, school closure, deletion after retention, DPDP rights requests passed on by schools, breach log
Platform users and audit	Platform users, roles, MFA status, and a log of every platform action

School account lifecycle

Every school account is always in one of six states, and the state alone decides what its users can do (PLT-04).

school account lifecycle · 7 states

A trial that ends without a plan goes straight to Read-only; a school that cancels goes Read-only for its notice period and then Closed.

State	School staff	Parents	Ends when
Trial	Full use	Full use	Plan paid, or trial ends
Active	Full use	Full use	Renewal invoice unpaid after its due date
Overdue	Full use + payment banner	Full use	Paid, or 15-day grace ends
Read-only	View and export only	View and pay school fees	Paid, or 60 days pass
Suspended	Owner only (pay or export)	No access	Paid, or Super Admin closes after notice
Closed	No access	No access	Data deleted after the retention period

Super admin key flows

A. School onboarding (self signup or sales-assisted)

1. Self signup creates the account automatically (Stage 1). For a sales-assisted school, Onboarding creates it from the Platform panel: organisation, type, board, plan, trial length, owner mobile and email.
2. The system creates the tenant, school, default branch and owner login, and sends the owner an invite.
3. Global masters are copied in: the board's current assessment template, grade scales, certificate formats, default fee heads, holiday template for the state, notification templates.
4. Optional: Onboarding uploads the school's Excel files (students, staff, opening fee balances) through the same import tool the school uses, in a staging copy first (dry run), then for real.
5. The school appears in the Schools list as Trial with the trial end date; the owner continues with the setup wizard (Stage 2).

B. Plan, billing and renewal

1. Before the trial ends (7 days and 1 day before), the owner gets a reminder to choose a plan.
2. On choosing a plan, the system creates a subscription and the first invoice: plan price × billable students (active students on the billing date) + add-ons, with GST as applicable. Invoices are numbered from the platform's own series.

3. The owner pays by online gateway (auto-renew possible) or bank transfer; Finance marks bank transfers received.
4. Paid → status Active. Mid-term changes (more students, new add-on) create a prorated invoice; fewer students take effect at renewal.
5. Unpaid after the due date → Overdue: reminders on day 0, 3, 7 and 14 to the owner by email, SMS and an in-app banner. The school keeps working during a 15-day grace period.
6. Still unpaid after grace → Read-only: everyone can log in and view, parents can still pay school fees, but staff cannot add or change records. Super Admin can extend grace once per year.
7. Read-only for 60 days → Suspended (logins blocked except the owner, who can pay or export data). A payment at any point returns the school to Active immediately.

C. Global master update (example: new board circular)

1. Content and compliance creates a new version of the template (for example "CBSE Middle 2027-28") instead of editing the old one.
2. Super Admin publishes it. Schools see a notice: "New template available for session 2027-28."
3. Each school chooses it when creating its next session; the running session keeps its old version so results never change mid-year.
4. Statutory rates (PF, ESI, professional tax, TDS) work the same way with an effective-from date; payroll automatically uses the rate valid for each month.

D. Support access (view a school's data)

1. The school admin raises a ticket from inside their panel (Help → Raise ticket), optionally with a screen recording or screenshot.
2. If support must see the school's data, Support sends an access request stating the reason and duration (default 2 hours, maximum 24).
3. The school admin approves or rejects it in their panel.
4. During the grant, Support uses "view as school admin" with a red banner on every screen; every action is written to both the school's audit log and the platform audit log.
5. Access ends automatically when the time is up or when the school admin revokes it. Without a grant, Support sees only the school's name, plan, usage counts and errors — never student, parent or staff details.

E. Monitoring and incidents

1. The monitoring screen shows per-school health: logins today, attendance marked, receipts, API errors, failed webhooks, queue backlog, last backup.

2. Alerts go to the on-call person when error rate, latency, queue backlog or backups cross their limits (spec Section 26).
3. During an incident, Super Admin posts an announcement banner to affected schools and updates the public status page; afterwards a short incident note is published.

F. Releases and feature flags

1. A new module is released behind a flag, switched on for 2–3 pilot schools first.
2. After feedback, it is switched on for all schools of the matching plan; release notes appear as an announcement.

G. Data requests and closure

1. A school can download a full export any time (Excel/CSV and PDFs); the platform logs who exported what.
2. On cancellation or after suspension, the school stays Read-only for the notice period, then Closed.
3. Closed school data is deleted after the retention period in the Data Processing Agreement; deletion is logged and confirmed to the owner by email.
4. DPDP requests from parents or staff are handled by the school (data fiduciary); the platform only supplies tools and logs.

Platform rules

- PLT-01 School data belongs to the school. Platform users see only school name, plan, status, counts and errors unless a support grant is active (flow D).
- PLT-02 Platform login is separate from school login: separate address, separate user collection, MFA mandatory.
- PLT-03 Every platform action (create school, change plan, extend grace, publish a template, support access, export) is written to `platformAuditLogs` with user, reason and time; actions on a school's data also appear in that school's own audit log.
- PLT-04 Status controls access: Trial and Active = full use; Overdue = full use plus banner; Read-only = view only, parent fee payments still allowed; Suspended = owner only; Closed = no login.
- PLT-05 Global masters are versioned and never edited in place once a school uses them.
- PLT-06 Cross-school queries are allowed only inside the platform service (dashboard, billing, monitoring); school-panel code can never query outside its own tenant.
- PLT-07 A school cannot be deleted from the panel by one person: closure needs Super Admin plus a second platform user, after the export is offered.

Platform data (MongoDB collections)

Collection	Holds
tenants	Organisation, type (School / Institute), owner, status, plan, trial end, created by
platformUsers, platformRoles	Platform staff logins, roles, MFA
plans	Plan name, price model, included modules, add-ons, limits, trial days
subscriptions	Tenant, plan, add-ons, billable students, start, renewal date, auto-renew
platformInvoices, platformPayments, creditNotes	Platform's own billing to schools, with GST
dunningEvents	Reminders sent and status changes (Overdue, Read-only, Suspended)
messageCredits	Credits per tenant, purchases, usage
masterTemplates	Board and assessment templates, grade scales, certificate formats, holiday templates, label sets — each with a version
statutoryRates	PF, ESI, professional tax, TDS slabs with effective-from dates
notificationTemplates	SMS/WhatsApp/email templates with DLT and provider IDs
supportTickets, supportAccessGrants	Tickets and time-limited access grants (who, school, reason, from, to, approved by)
announcements, featureFlags	Banners to schools; module switches per tenant or plan
usageDaily	Per-tenant daily counts (logins, students, receipts, messages, storage) for billing and monitoring
platformAuditLogs	Every platform action

The signup flow (Stage 1) writes `tenants`, `subscriptions`, the first school, branch and owner user in one transaction.

Where development starts

Build in this order; each step works end-to-end before the next one starts. Steps 1–6 are the minimum before any real school can use the product.

1. **Foundation** — NestJS project, MongoDB replica set, the tenant plugin that adds `tenantId` / `schoolId` to every query (spec DB-02), auth (JWT + OTP), audit log, React + Tailwind shell with the design tokens.
2. **Platform core** — platform login and roles, `tenants`, `plans` (trial plan only at first), Schools list and school detail page, platform audit.
3. **School signup** — public signup, OTP verification, tenant + school + owner created in one transaction, first login, two-step login for admin (Stage 1).
4. **School setup** — setup wizard, roles and permissions, staff and teacher invites (Stages 2–3).
5. **Global masters** — board template and grade scale versions, fee head library, notification templates, copied into a school at signup.
6. **MVP school modules** — students and admission, attendance, fee structure, counter and online fees, notices, parent app (spec Release R1).
7. **Billing** — paid plans, invoices with GST, payments, dunning and status changes (flow B); until then, schools stay on trial or are activated manually by Super Admin.
8. **Support and monitoring** — tickets, support access grants (flow D), monitoring screen, announcements, feature flags.
9. **Data requests** — export, closure and deletion (flow G).

Stage 1 — School signs up on the platform

A school or institute creates its own account in about 5 minutes and lands in its admin panel as the first School Admin; nothing is shared with any other school from this point on.

1. **Signup page** — the owner enters organisation name, type (School or Institute), city, board (CBSE / RBSE / other, schools only), approximate student count, owner name, mobile and email.
2. **Verify** — OTP on mobile and a link on email. Both must be verified before the account is created.
3. **Plan** — the owner picks a plan (free trial or paid). Trial length and limits come from the Platform panel.
4. **Account created** — the system creates a new tenant, one school, one default branch and the first user with the School Admin role. A unique `tenantId` and `schoolId` are attached to every record created after this.

5. **First login** — the owner logs in, sets a password, turns on two-step login (mandatory for admins) and is sent to the setup wizard (Stage 2).

Who	Panel	Screens
School owner	Public signup, then School admin panel	Signup, Login
Platform team	Platform panel	Schools list, plan and trial settings, support access (only with the school's approval)

Rules: one mobile number can own several schools (a trust with many schools); every later login is tied to exactly one tenant; a multi-branch group adds branches from Settings, not by signing up again.

Stage 2 — Admin sets up the school

Before any student or teacher is added, the admin completes a 9-step setup wizard; every later module reads from this setup, so the order matters.

1. **School profile** — name, logo, address, UDISE code, affiliation number, board, medium.
2. **Branches** — skip if there is only one campus.
3. **Academic session** — for example 2026-27 with start and end dates (institutes: term or intake).
4. **Classes and sections** — classes, sections, seats per section; RTE seats are calculated for entry classes (institutes: courses and batches).
5. **Subjects** — per class, with type (scholastic, co-scholastic, optional, language).
6. **Timings and holidays** — working days, periods, breaks, holiday calendar.
7. **Number series** — formats for admission no., receipt no., TC no., employee code.
8. **Grading scheme** — pick the board template (CBSE Middle, CBSE Secondary, RBSE…) and adjust if needed.
9. **Staff and roles** — import staff from Excel or add them one by one (Stage 3).

After the wizard the admin also sets up the **fee structure** (heads, amounts per class, installments, late fee, concession rules) and, if used, **transport routes** and **hostel rooms**.

Result of Stage 2: the school has a current session, classes with seat limits, subjects, a timetable skeleton, a fee structure and staff records. The admin dashboard starts showing numbers as soon as students are added.

Screens: Setup Wizard, Fee Structure, Transport, Hostel, Roles.

Stage 3 — Staff, teachers, students and parents get access

Nobody creates their own login except the school owner: the admin invites staff, and student and parent logins are created automatically on admission; what each person sees is decided by role plus scope.

Who	How the login is created	How they log in	What decides their access
Office staff (accountant, front office, HR, librarian…)	Admin adds the employee, assigns a role, sends an invite	Username + password, two-step login for finance and admin roles	Role (permissions) + branch
Teacher	Admin adds the employee record (Teacher Profile) and sends an invite by SMS or email	Mobile OTP or password; staff app or web	Role (Class Teacher, Subject Teacher, Exam Coordinator) + scope taken automatically from class-teacher and subject allocation
Parent	Created on admission from the guardian's mobile number	Mobile OTP in the parent app	Only their linked children; one login for all siblings
Student	Created on admission; the school chooses from which class students get their own login (for example Class 6+)	Mobile or student ID + password	Only their own timetable, homework, attendance, results, notices

Teacher joining, step by step

1. HR or admin creates the employee: personal details, documents, qualifications, salary structure.
2. Admin assigns roles. Academic allocation (which class, which subject) is done in Academics; the teacher's scope follows automatically.
3. The teacher receives an SMS or email invite, verifies with OTP and sets a password.
4. On login the teacher lands on the Teacher panel: today's periods, attendance to mark, homework, marks entry, messages.

5. When the allocation changes (new session, substitution, section change), the teacher's access changes with it; nobody has to edit permissions by hand.

Screens: Staff Directory, Teacher Profile, Users, Roles & Permissions, Add Student, Parent and Teacher mobile apps.

Stage 4 — Admission: from enquiry to enrolled student

An admission moves through eight stages; the moment the admission fee is paid, the system creates the student, links guardians, allocates a section and starts the fee ledger in one step.

1. **Enquiry** — walk-in, phone, website form or social-media lead. Front office records child, class, parent mobile and source. Duplicate check runs on mobile + child name + DOB.
2. **Follow-up** — counsellor calls or meets; every contact is logged with the next follow-up date. Overdue follow-ups show on the CRM board.
3. **Application** — parent fills the online form (link on WhatsApp) and uploads documents; application fee can be paid online.
4. **Documents verified** — front office checks each document; anything unclear goes back to the parent as "re-upload". Age eligibility is checked against the class rule.
5. **Test / interaction** — slot booked, outcome recorded.
6. **Approved** — principal approves (needs seat available in the class).
7. **Fee paid** — admission fee and first installment collected at counter or online.
8. **Enrolled** — automatically: student record, admission number, guardian links (and sibling detection), section and roll number, fee plan and ledger demands, parent app login, welcome message to parent.

Exits: at any stage the enquiry can be marked *Lost* (reason required). RTE admissions follow the same path with the state portal number recorded and tuition set to zero.

Direct admission: for a mid-year joiner or a school migrating data, staff can skip the CRM and use **Add Student** directly; the same records are created.

Screens: Admission CRM, Application Review, Add Student, Student Profile, Fee Counter.

Stage 5 — A normal school day

On a normal day the system is driven by four moments: morning attendance, periods and substitutions, fee and front-office work during the day, and the evening homework diary and cash closing.

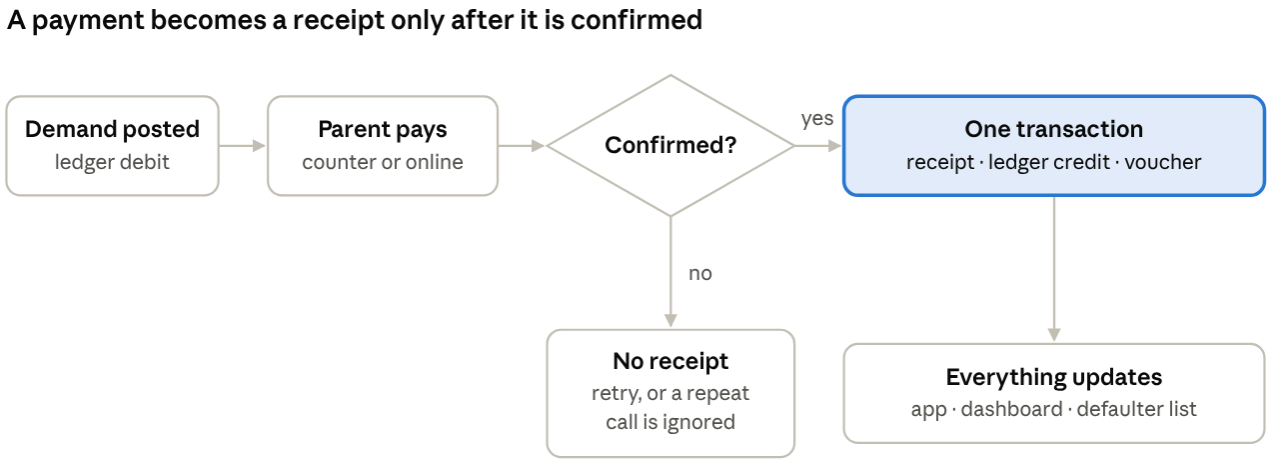

Time	What happens	Who	What the system does automatically
7:30 am	Staff punch in (biometric or app within 200 m)	All staff	Staff attendance marked; late arrivals counted; vacant periods of absent teachers listed
7:45 am	Substitutes assigned	Vice principal / admin	Substitute teacher gets push + SMS; timetable for the day updated
8:00–10:00 am	Class teacher marks attendance (all present by default, tap only exceptions)	Class teachers	Absent / late parents notified within 5 minutes; at 10:00 the admin sees sections not yet marked
During periods	Teaching, lesson plan and syllabus topic marked done	Subject teachers	Syllabus % updated per class and subject
All day	Fee counter, online payments, admissions, visitors, early pickups, complaints	Accountant, front office, parents	Receipts and ledger updated instantly; parent app shows paid status; visitor log kept; complaint tickets get a 72-hour target
2:00–3:30 pm	Homework posted, marks entry, parent messages	Teachers	Homework stored per class-subject
4:00 pm	Daily homework diary	System	One combined push per class to parents
Evening	Day-end cash closing at each counter	Accountant, supervisor	Counted cash vs system total; difference recorded; supervisor sign-off
Night	Background jobs	System	Daily summaries for dashboards, chronic absentee check, document expiry alerts, payment reconciliation retries

What the principal sees all day: the admin dashboard — attendance %, sections not marked, money collected today, dues, approvals waiting (concessions, marks unlock, TC, leave).

Screens: Admin Dashboard, Staff Attendance, Timetable, Attendance, Homework & Syllabus, Fee Counter, Visitors, Complaints, Day-end Cash Closing, Teacher and Parent mobile apps.

Stage 6 — Fee flow: from demand to receipt

Money is tracked as a ledger: a demand is posted before the due date, a receipt is created only when payment is confirmed, and everything else (parent app, accounts, dashboard, defaulter list) updates from that one entry.

fee flow · demand to receipt, 1 decision

A receipt, its ledger credit and its accounts voucher are written together or not at all, so the books always match.

1. **Demand** — 15 days before each installment, the installment amount for each student (tuition, transport, lab… minus concessions) is posted to the student's ledger. Parents see "Due ₹17,100 on 15 Nov" in the app.
2. **Payment at the counter** — accountant searches the student, ticks installments (oldest first), adds late fee if any, picks cash, UPI QR, cheque, card or bank transfer, and saves. Receipt prints in under 3 seconds.
3. **Payment online** — parent taps Pay in the app or a WhatsApp link; the server creates the order with the exact amount; the parent pays by UPI, card or net banking.
4. **Confirmation** — online payments count only after the gateway's verified webhook or a status check. A repeated webhook finds the payment already processed and creates nothing.
5. **One transaction** — next receipt number from the number series, receipt, ledger credit, payment status and accounts voucher saved together.
6. **Everywhere updates** — parent app shows Paid and the receipt PDF; dashboard collection goes up; the student leaves the defaulter list; report card hold (if any) lifts.

7. **Corrections** — cancellation, cheque bounce and refund never edit a receipt; each adds a reversing entry and needs accountant plus principal approval.
8. **Day end and next morning** — cash closing at each counter; gateway settlement matched with receipts; exceptions go to the reconciliation screen.

Screens: Fee Structure, Fee Counter, Parent Fees (mobile), Defaulters, Online Payment Reconciliation, Day-end Cash Closing, Accounts.

Stage 7 — Exams: from date sheet to report card

Marks move through four locks (Draft → Submitted → Verified → Final), and a section's report cards can be published only when every subject is Final and remarks are complete.

1. **Exam setup** — exam coordinator creates the exam (Half-Yearly, Classes 6–8), picks the assessment components from the scheme (Periodic Test 10, Notebook 5, Subject Enrichment 5, Exam 80) and builds the date sheet with rooms and invigilators.
2. **Before the exam** — date sheet published to parents and students; admit cards and seating plan printed.
3. **Marks entry** — each subject teacher enters marks only for their own class-subject (numbers, or AB / ML / EX). Entries autosave; invalid values (above maximum) block submission.
4. **Submit and verify** — teacher submits; coordinator verifies and marks Final. After Final, changes need an unlock request approved by the coordinator or principal, and the old and new values go to the audit log.
5. **Remarks** — class teacher adds co-scholastic grades and remarks; attendance % comes automatically from the attendance module.
6. **Result calculation** — server job applies the scheme: weighted totals, grade (A1…E), pass rule, compartment, rank if enabled.
7. **Report cards** — PDFs generated in bulk per section and checked by the coordinator.
8. **Publish** — report cards appear in the parent app; for students with fee dues beyond the school's limit, cards stay on hold until paid.
9. **Analysis** — subject-wise pass %, toppers, teacher-wise results for the principal.

Screens: Exam Setup & Date Sheet, Marks Entry, Results & Report Cards, Parent Report Card (mobile), Audit Log.

Stage 8 — Every month

Once a month HR runs payroll from locked attendance and approved leave, accounts chase dues and match payments, and management gets its reports; each of these posts entries into the accounts day book automatically.

When	Flow	Steps
Last working day	Payroll	HR locks staff attendance → system calculates payable days, salary, PF, ESI, TDS, loan EMI → HR reviews exceptions (new joiners, leave without pay, arrears) → principal approves → payroll frozen → bank file and payslips (staff app + email) → salary vouchers in accounts
15 days before each installment	Fee demand	Demands posted to every student's ledger; parents see the due amount and date in the app
After each due date	Defaulters	Students unpaid beyond 15 days appear as defaulters by bucket (15–30, 31–60, 60+ days) → reminders with pay link by WhatsApp or SMS → late fee applied at payment time → over 60 days: report card hold if the school uses it
Daily, reviewed monthly	Online payment reconciliation	Gateway settlement file matched with receipts; exceptions (paid but no webhook, double payment, amount mismatch) resolved by the accountant
Month end	Accounts	Bank reconciliation, trial balance, Tally export for the CA
Month end	Reports	Fee collection efficiency, attendance, syllabus progress, payroll summary emailed to management; group dashboard for multi-school owners
Rolling	Compliance	Document expiry alerts (police verification, medical fitness, vehicle insurance), CPD hours, leave balances

Screens: Staff Attendance, Leave, Payroll, Defaulters, Online Payment Reconciliation, Accounts, Reports & KPIs.

Stage 9 — Communication: notices, PTM, complaints

Every message from the school goes through one notification service that tries the app first, then WhatsApp, then SMS, and keeps a delivery and read record for each parent.

Notice / circular

1. Staff writes the notice (English and optional Hindi), picks the audience (whole school, wing, class, section, bus route, staff) and channels.
2. School-wide notices go to the principal for approval; others go straight out or at a scheduled time.
3. Parents get a push notification; if not opened in 10 minutes, SMS or WhatsApp follows (if selected).
4. Read % is tracked; consent notices collect a Yes/No from each parent.

Parent–teacher meeting (PTM)

1. Admin creates the PTM: date, classes, 10-minute slots per teacher.
2. Parents book a slot in the app; unbooked parents get a reminder.
3. On the day the teacher marks Met or No-show and writes a short note, visible to the class teacher and principal.

Parent–teacher chat

Parents can message only their child's class teacher and subject teachers; teachers can switch off replies after school hours; the admin can view every thread.

Complaint

1. Parent raises it in the app, or front office logs it; a ticket number is created with a category.
2. It is assigned to the right owner (transport manager, accountant, IT…) with a 72-hour response target.
3. Overdue tickets escalate to the principal; resolved tickets are confirmed with the parent.
4. Discipline incidents and child-protection reports follow separate, restricted flows that only authorised staff can see.

Screens: Notices & Communication, PTM, Complaints & Discipline, Parent Home (mobile).

Stage 10 — Year-end rollover into the new session

At year end the school does not start from zero: the new session is created from the old one, students are promoted class by class, and the closed session stays as a read-only archive.

1. **Annual results published and locked** for every section (Stage 7).
2. **New session created** — for example 2027-28. Setup (classes, sections, subjects, timetable skeleton, fee structure) is copied as a draft; admin edits what changed, such as new fees or a new section. A fee hike above the school's limit shows a warning.
3. **Promotion, class by class** — system suggests Promote, Detain or Leave from each student's result; the class teacher or admin overrides with a reason.
4. **Confirm** — new enrolment rows in 2027-28 with class, section and roll number; fee plans attached; unpaid 2026-27 dues carried forward as opening balance.
5. **Leaving students** — Transfer Certificate issued after clearance checks (fees, library, transport); status becomes Left.
6. **Passing-out class** (Class XII or final course year) — status becomes Passed Out; optional alumni record.
7. **Teacher allocation** for the new session — class teachers and subject teachers assigned again; teacher access updates automatically.
8. **Switch current session** — from this moment attendance, fees and homework run in 2027-28. 2026-27 opens read-only; any change to it needs the Session Reopen permission and is audited.
9. **New admissions** that came through the CRM for 2027-28 (Stage 4) are already waiting in the new session.

Each student's promotion can be reversed until the first attendance of the new session. Then the cycle continues from Stage 5.

Screens: Year-end Promotion, Transfer Certificate, Setup Wizard (new session), Fee Structure, Timetable.

Exit flows

Three things can end: a student leaving, a staff member leaving, or a school stopping its subscription; in all three, records are kept (never deleted) and access is closed.

Exit	Steps	What happens to data and access
Student leaves mid-year	Parent requests TC (app or office) → clearance checks: fee dues, library books, transport → dues paid or approved override → principal approves → TC issued with QR verification	Status Left; removed from attendance and future fee demands; future transport and hostel charges reversed; parent login turns read-only, then closes after the retention period
Staff member leaves	Resignation recorded with notice period → handover: classes reassigned, lab and library items returned → exit checklist → full and final settlement in payroll (salary, leave encashment, gratuity if due) → relieving letter	Login disabled on the last working day; historical attendance, marks entered and payroll stay linked to the employee record
School stops using the software	Owner requests closure (or subscription lapses after reminders) → read-only grace period → full data export for the school (Excel/CSV of students, fees, results, staff + PDFs) → account closed	Data deleted after the agreed retention period as per the Data Processing Agreement; audit of the export kept by the platform

Screens: Transfer Certificate, Staff Directory and Teacher Profile, Payroll, Users, Platform panel.

Who does what

The school admin owns setup and approvals, teachers own attendance, homework and marks, the accountant owns money, and parents mostly receive information and pay.

Stage	Platform team	School admin / principal	Office staff	Teacher	Parent	Student
1 Signup	Plans, trial, support	Signs up, verifies	—	—	—	—
2 Setup	—	Runs setup wizard, fee structure	HR adds staff	—	—	—

Stage	Platform team	School admin / principal	Office staff	Teacher	Parent	Student
3 Access	—	Assigns roles	Invites staff	Joins by invite	Login created on admission	Login created on admission
4 Admission	—	Approves	Enquiry, follow-up, documents, fee	—	Applies, uploads, pays	—
5 Daily	—	Dashboard, substitutions	Fees, visitors, complaints	Attendance, teaching, homework	Gets alerts, applies leave	Sees timetable, homework
6 Fees	—	Approves concessions, cancellations	Collects, reconciles, closes cash	—	Pays online	—
7 Exams	—	Approves unlocks	Exam coordinator sets up	Enters marks, remarks	Sees report card	Sees results
8 Monthly	—	Approves payroll	Payroll, defaulters, accounts	Applies leave, gets payslip	Gets reminders	—
9 Communication	—	Approves notices	Sends notices, handles complaints	Chats, PTM notes	Reads, books PTM, complains	Reads notices
10 Year-end	—	Confirms promotion, new session	Issues TCs, sets new fees	Class teacher reviews promotion	Sees new class	Sees new class
